NARCISSI or DAFFODILS

Mrs. E. H. Krelage

*Easiest of all
bulbs to grow —
rapid increase in
bulbs and flowers
for many years*

The flowering season begins extremely early and lasts until quite late. As cut flowers they have few equals. Culture is the easiest possible. Plant in any good garden soil covering to a depth of about one and one-half to twice the height of the bulb measuring from base to shoulder. Early planting is advisable, however many fine flowers are produced from plantings made after the first of February. Narcissi multiply quite freely and should be taken up during summer or early fall about every 3 or 4 years and replanted. Never remove green foliage from the bulbs.

No garden is too small for a few Daffodils.

Is ADCO expensive?

Not at all. Every pound of **ADCO** is capable of turning twenty pounds of field or garden waste into 40 pounds of clean manure.

How long does this take?

Comparatively few weeks—on an average, about twelve—if the mixture is kept moist and turned over occasionally.

Where can I get ADCO?

From your dealer in farm and garden supplies. If he has not yet stocked **ADCO**, ask him to do so; and send us his name and address. We will not involve you.

And if I am in a hurry to get ADCO?

Write directly to us, telling how much waste material you will have, and we will try to get a supply to you without delay.

If you would like to know more about **ADCO**, drop us a line and we will send you a little booklet telling the history of its discovery and its uses.

And remember:

THERE IS NOTHING LIKE MANURE

and

THERE IS ONLY ONE ADCO!

THE GARDENER'S CATECHISM

Read it and worry no more.

What soil is fertile—can grow things?

Top-soil—and little else.

What is top-soil?

Top-soil is the product of decayed vegetation accumulated for untold centuries—thousands, perhaps millions, of years.

Why is our own soil becoming less fertile?

Because years of cropping have taken out of it a goodly proportion of its organic plant foods.

What can we do about it?

Return to the soil the discarded organic wastes—cuttings, stalks, grass, straw, leaves, weeds, vines, etc.—which too often are burned or thrown away.

How can we do it?

These wastes should be treated with **ADCO**, and then become a true manure, clean and odorless.

What is ADCO?

ADCO itself is *not* a fertilizer. Instead, it is a combination of the substances which support the life of the micro-organisms, always present, which convert non-woody wastes into *genuine* manure, but free from its offensive characteristics.

Wyatt's DUTCH HYACINTHS

Hyacinths never fail to catch the admiration and affection of those interested in spring flowering bulbs. In the garden plant about 4 inches deep, about 6 inches apart. A good general rule is to cover the bulb to a depth of about twice its height. Plant in good well-drained soil. It is advisable to avoid manures. For indoor use Hyacinths may be potted during autumn. Plunge pots outside in the ground and cover with a coarse mulch. Leave so until a good root system has been established, generally in about 10 weeks. Keep in a somewhat cool location after taking the pots inside. No attempt should be made to flower these bulbs before mid-February. Both sizes offered may be grown indoors or in the garden. Larger bulbs are, however, recommended for pots and the bedding size for either use.

WYATT'S DARWIN TULIPS

At their best in beds and borders, Tulips like a place in the sun and put on the best show in a fertile, loamy, well drained soil. Beautiful pictures can be created with groups of 6 to 12 or more at the garden gate, doorstep, around a bench or terrace. Groups of Tulips work wonders with their showy colors in the mixed flower border or in front of evergreens or shrubbery.

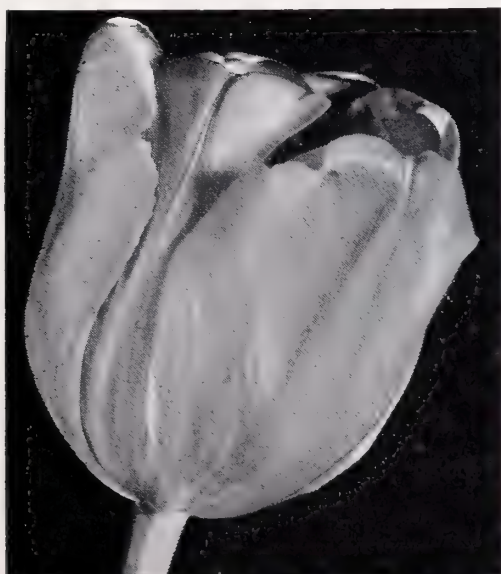

If Tulips were grown in the same bed last spring, use fresh top soil if possible. Place the bulbs 5 to 6 in. apart and plant them 5 to 6 in. deep. In the warmer climates, planting should be delayed till Thanksgiving or later.
